Chad Koslovsky

Frontend craft, with responsibility for the system behind it

Milliken, Colorado · chad@koslovsky.xyz

Senior Front End Engineer | Lively

01 PROFILE

I build interfaces as part of the whole product: the data, access rules and support work matter as much as the screen. My work brings together React client delivery, a pricing application I operated end to end and an early-stage TSX framework of my own.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Lead a referral-based technical practice, carrying client needs through product design, implementation and ongoing support.

Build React and TypeScript interfaces backed by authenticated APIs and tenant-aware services; own the surrounding data, deployment and direct client support.

Product Engineering and IT (Long-Term Contract) · NuPrice | Client engagement within Technomancy IT | 2019-2021

Built and operated a client application joining marketplace data, repricing rules, accounts, subscriptions and billing.

Owned analytics, embedded customer support and technical operations, following issues across the customer workflow and its underlying services.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC and handled production escalations, with recovery verification, monitoring and operating procedures.

Migrated workloads from Hyper-V and VMware ESXi to Docker and Kubernetes; upgraded server and firewall infrastructure and ran SOC 1 and SOC 2 audits.

Systems / Software Engineer · Office Evolution | 2014-2015

Built centralized applications for CRM, provisioning, onboarding and service operations across locations.

Turned cross-department handoffs into shared workflows, supporting the architecture across client environments and working with the CEO and CIO.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported managed-service clients' networks and endpoints, communicating directly with owners and end users.

Built diagnostic and support tooling for recurring problems, used monitoring to guide troubleshooting and handled on-call issues.

Infrastructure and Systems Focal · IBM | 2010-2012

Supported shared enterprise infrastructure, coordinating changes and incidents with application, vendor and business teams.

Automated audit and backup workflows and managed virtualization test labs and hosted desktop platforms.

03 SELECTED WORK

ProofMark · Client engineering contribution | Contribution completed

For a client document-signing product, I designed the workflow across identity, PDF fields, routing and audit history, using React/Next.js alongside APIs and PostgreSQL. My completed contribution joined the interface to verification and explicit fallback paths, experience I would bring to sensitive account flows.

Kerf · Independent framework and UI toolkit | Early development

Kerf is my early-development TypeScript/TSX framework: I am building its compiler, reusable UI toolkit and routing, authentication and data layer. The preview describes direct page updates and actionable diagnostics for coding agents. It is where I work on maintainable UI architecture, separately from my React work.

NuPrice · Long-term client application | 2019-2021

At NuPrice, a long-term client engagement, I built and operated the application connecting marketplace data and pricing rules to accounts, subscriptions, billing and analytics. Owning embedded support and technical operations kept customer-facing decisions connected to the services behind them, a useful perspective for investment-product integrations.

04 CAPABILITIES

React, TypeScript & JavaScript · HTML/CSS & reusable UI architecture · Node.js APIs & PostgreSQL · Authentication & integration workflows · Production troubleshooting & AWS
